DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.
- 2. Claims 1-5 rejected under 35 U.S.C. 102(e) as being anticipateed by Walker et al (US 6,477,513)

Re claim 1, Walker discloses a system for processing electronic payments that consists of a bank (326), a plurality of payer accounts within the bank (buyer--504/ fig. 6), a plurality of payee accounts within the bank (seller--504/ fig. 6), a holding maintained by the accounts bank or a third party (trusted agent—318), and a process for transferring funds from payer accounts or payee accounts, residing within the same bank (see Walker, Abstract, col. 4, lines 24-47; and col. 5, lines 65 to col. 6, line 38), by first transferring an amount equal to the payment from the payer's account into the holding account (escrow account), and then transferring an accounts amount equal to the payment from the holding into the payee's account (see Walker col. 5, line 65 to col. 6, line 38).

Application/Control Number: 10/082,718

Art Unit: 3624

Re claim 2, a system according further comprising a routine for screening out faulty payment funds transfers from payee accounts into the holding account by delaying movement of payment funds, for each transaction, out of the holding account until the bank has cleared each payment funds transfer into the holding account through a settlement process at the end of a designated transaction period (see Walker col. 5, line 65 to col. 6, line 38).

Re claim 3, a system for processing electronic payments that consists of a defined collection of banks each of which supports its own internal holding account used to facilitate electronic payments, a plurality of payers, each of which maintains an account with at least one bank within the defined collection of banks, a plurality of payees, each of which maintains an account with at least one bank within the defined collection of banks (see Walker, Abstract, col. 4, lines 24-47; and col. 5, lines 65 to col. 6, line 38),

an agent, controlled by either the defined collection of banks or a third party, that directs the transfer of payment funds from a payer account into a holding account residing within the same bank as the payee account with the defined collection of banks, and also directs the transfer of payment funds into a payee account from a holding account residing within the same bank as the payee account within the defined collection of banks, a process for settling funds between the various holding accounts maintained in the defined collection of banks by executing a series of funds transfers between the various holding accounts at the end of a prescribed transaction period (see Walker, Abstract, col. 4, lines 24-47; and col. 5, lines 65 to col. 6, line 38).

Application/Control Number: 10/082,718

Art Unit: 3624

Re claim 4, A system according to claim 3, further comprising a routine for screening out

faulty payment funds transfers from payee accounts into holding accounts by delaying movement

of payment funds, for each transaction, out of the associated holding account until the bank in

which the holding account resides has cleared each payment funds transfer into the holding

account though a settlement process at the end of a designated transaction period (see Walker,

Abstract, col. 4, lines 24-47; and col. 5, lines 65 to col. 6, line 38)

Re claim 5, in which the settlement routine for balancing funds across the various holding

accounts consists of first transferring all of the excess funds from those holding accounts having

excess funds into the one holding account having the largest deficit, and then transferring funds

from the holding account that formerly had largest deficit into the remaining holding accounts

having deficits, in the exact amounts needed to balance each remaining holding account (see

Walker, Abstract, col. 4, lines 24-47; and col. 5, lines 65 to col. 6, line 38)

Conclusion

3. The prior art made of record and not relied upon is considered pertinent to applicant's

disclosure.
